
Sperm DNA Damage may prevent you from becoming a Dad

SpermComet[®]
The Next Generation Test For Men's Health

SPERM DNA TESTING

Fertility problems are just as likely to be caused by male issues as female issues.

Around 1 in 6 couples in the UK experience the emotional heartache of infertility. Unfortunately, the response to such issues is still focussed around the woman, while the man is often given very few checks.

In many cases, men are only offered a traditional semen analysis which will only reveal basic problems.

30% of men and women are given the 'all clear' – leading to a diagnosis of 'unexplained infertility'.

This is unsatisfactory for couples and clinics alike

We have now shown that up to 80% of couples with unexplained infertility have problems in their sperm DNA. Men can make simple lifestyle changes to improve their sperm DNA when given the right information.

SpermComet® reveals your Sperm DNA Health.

To find out more about the SpermComet® test you can talk to your GP or Fertility Clinic.
